

# ZorbO™

OIL SCUM ABSORBER

a new  
technology  
for a  
naturally  
cleaner spa

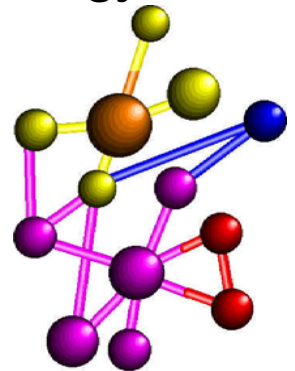

## ZorbO's Advanced Molecular Oil Absorption Technology...

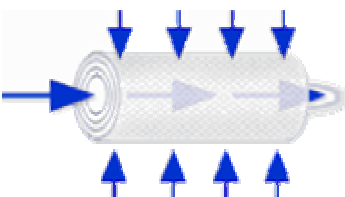

The biggest advance in spa care in years, ZorbO uses a new scientific technology originally developed to clean up ocean oil spills. It works wonders for your hot tub by literally drinking up oil and scum, helping to achieve cleaner, fresher water.

The long-lasting ZorbO floats on the surface attracting impurities like a magnet, and reduces odors without chemicals or hazardous ingredients.

The hi-tech material in the ZorbO has a unique molecular structure which absorbs many times its weight in body oils, lotion residues, and scum, to help keep your hot tub water pristine clean. Unlike foam rubber scum products, the **ZorbO will not absorb water** so it never gets soggy!

## Superior Flow-thru Design...

The ZorbO has a unique *flow-through* core, and much more surface area. This allows its super-absorbent material to trap more contaminants than competitive ball-shaped products made of simple sponge rubber.

Replace about every 4 months, depending upon bather load.
